

Operating instructions Power-Plug QC 3.0

Specifications:

Dimensions: 27mm X 51mm X 52mm

Input: AC 100-240V ~ 50 / 60Hz

Output 1: QuickCharge (18 Watt) Max

DC 3.6V~6.5V/3A or 6.5V~9V/2A Or 9V~12V/1.5A

Output 2: ISmart (12 Watt) Max DC 5V 2.4A

Using the charger:

The charger is meant for indoor use.

Power-Plug QC 3.0 is equipped with 2 different USB-A ports:

1: QuickCharge port recognizable by the green color, it delivers up to 18 watts of compatible devices. This port also works as a normal 1A USB port if you connect a device that is not supported by QuickCharge.

2: ISmart port, this is a heavily designed USB port suitable for all devices. This port delivers up to 12 watts depending on the connected device.

Comments:

The variable voltage and total power of the QuickCharge connection only work if the connected device supports QuickCharge. In this case, a connected device can charge up to 70% faster than a device that does not support it.

If you connect a device to the ISmart port, ensure a good quality USB cable certified for use up to 2.4A

Storage of the charger:

Do not store Power-Plug QC 3.0 in damp rooms, the connections can start to oxidise.

Tip: The packaging is an ideal protection when storing your Power-Plug
