

## Operating instructions Power-Plug Mobile

### Specifications:

Dimensions: 25mm X 28mm X 37mm

Input: DC 12-18V

Output USB-A & C / QuickCharge 3.0: (2x 18 Watt) Max  
2x QuickCharge 3.0: 3.6~6V/3A 6.2~9V/2A 9~12V/1.5A

Output USB-C / Power-Delivery 2.0:

5V/3A 9V/3A 12V/3A 15V/3A 20V/2.25A (45 Watt) Max

### Using the charger:

The charger is meant for use in the car.

Power-Plug Mobile is equipped with 2 different USB ports:

1: USB-A QuickCharge port recognizable by the green color, it delivers up to 18 watts of compatible devices. This port also works as a 'normal' USB port if you connect a device that is not supported by QuickCharge.

2: USB-C with QuickCharge & PowerDelivery, if a device is connected with support for QuickCharge, this port will function as a USB-C QuickCharge port. If an Ultrabook / Macbook / Laptop is connected, this port will function as a USB-C Power-Delivery port and charge the connected devices with a maximum power of up to 45 Watt.

### Comments:

The variable voltage and total power of the QuickCharge connection only work if the connected device supports QuickCharge. In this case, a connected device can charge up to 70% faster than a device that does not support it.

### Storage of the charger:

Do not store Power-Plug QC 3.0 in damp rooms, the connections can start to oxidise.

Tip: The packaging is an ideal protection when storing your Power-Plug Mobile
